DATE MAILED: 07/17/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/802,663

Applicant(s)

KUNG ET AL.

Examiner

Joseph W. Drodge

Art Unit

1723

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-16 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 1723

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,4,5,8 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Ellis patent 4,629,568. For claims 1,9 and 16, Ellis discloses membrane module 10, inlet/feed line 12, concentrate outlet 14, permeate outlet 16, tap or faucet 28a, flush reservoir 24, and communication between reservoir and inlet when faucet is turned off (Abstract, column 7, line 61-column 8, line 12 (since there is no flow of raw water into the system, flow to faucet 28a is inherently not occurring)). For claims 2, 4 and 5, see check valves 26, 150 and 156. For claim 8, there is no reservoir proximate the permeate line through the post-filter 62 to the faucet.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3,9,10 and 12-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ellis patent 4,629,568 in view of Gramms et al patent 5,512,167. For claims 1,9 and 16, Ellis discloses membrane module 10, inlet/feed line 12, concentrate outlet 14, permeate outlet 16, tap or faucet 28a, flush reservoir 24, and communication between reservoir and inlet when faucet is turned off (Abstract, column 7, line 61-column 8, line 12 (since there is no flow of raw water into the system, flow to faucet 28a is inherently not occurring)). For claims 2, 4 and 5, see check valves 26, 150 and 156. For claim 8, there is no reservoir proximate the permeate line through the post-filter 62 to the faucet. For claims 3 and 9 and claims dependent therefrom, also see shut-off valve 20. The claims differ in requiring the system being operative to open the feed line based on pressure differential between feed line and permeate line. Gramms teaches a controller that flushes a membrane responsive to such transmembrane pressure. It would have been obvious to one of ordinary skill in the art to have modified the Ellis

Art Unit: 1723

system by incorporating the controller and function of correlating flushing through the feed line responsive to pressure difference of Gramms, in order to optimize membrane operation by cleaning when and only when such cleaning is necessary and desirable.

For other dependent claims, for claim 10 the valve 20 of Ellis may be a non-electric type (column 7, lines 24-31), for claims 12-15 again see check valves 26, 150 and 156 of Ellis and relative position of flush reservoir not being in-line with flow to the faucet.

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ellis in view of Hart patent 6,110,360. Claims 6 and 7 differ in requiring a line or feed pressure of no more than about 75 psi. and reservoir volume being small, thus of 1 liter or less. Hart teaches to operate a system transporting reverse osmosis treated water to a faucet operating at a very low line pressure (column 6, lines 27-29) and designed to avoid wasting water, inherently having a relatively small storage tank or reservoir designed for small-scale household uses (column 6, lines 37-38 and column 11, lines 60-65). It would have been obvious to have adapted the Ellis system to one having relatively low line pressures and relatively small reservoir, as suggested by Ellis, to accommodate varied uses for small-scale household uses.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ellis in view of Gramms et al, as applied to claims 8-10 above, and further in view of Hart patent 6,110,360. Claim 11 also differs in requiring a line or feed pressure of no more than about 75 psi. and reservoir volume being small, thus of 1 liter or less. Hart teaches to operate a system transporting reverse osmosis treated water to a faucet operating at

Art Unit: 1723

a very low line pressure (column 6, lines 27-29) and designed to avoid wasting water , inherently having a relatively small storage tank or reservoir designed for small-scale household uses (column 6, lines 37-38 and column 11, lines 60-65). It would have been obvious to have adapted the Ellis system to one having relatively low line pressures and relatively small reservoir, as suggested by Ellis, to accommodate varied uses for small-scale household uses.

Art Unit: 1723

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Drodge at telephone number 571-272-1140. The examiner can normally be reached on Monday-Friday from 8:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda Walker, can be reached at 571-272-1151. The fax phone number for the examining group where this application is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either private PAIR or Public PAIR, and through Private PAIR only for unpublished applications. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have any questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
